

# Hosting Services

Hosting is the most important service you need for your website.

What you need in hosting is a fast, reliable server that allows people to access your website quickly, and keeps your site up 99% of the time (no one can promise 100% but we get close).

But there is more to hosting today than most want to tell you. A slow server can affect your website's Quality Score with Google and other engines where people find you - lowering your position just due to that ONE thing! This IS important.

Today Google and other Engines are strict about quality control and have a "Quality Score" given to every website that they list free or even for paid ads. They want to insure that your website gives their users who they send to your site a quality experience.

The SPEED of your site opening, is determined by the site's construction and the server it resides on. There are cheap hosting services that will save you \$10 - \$20 a month, but may overcrowd their servers with too many sites, thus too much activity, to compensate for the lower fees. This can hurt your overall website presence today.

We insure the server you're on is NOT over crowded, and it is watched and maintained 24/7.

## NO TECHNO-BABBLE SO IT'S EASY FOR YOU

- We have spent years perfecting our hosting system, in order to give our clients a simple, powerful and easy to use system for their websites.

- We give you the space you need, no need to show huge #'s that you will never use

- Our Dedicated Servers reside exist within at a huge data center and information on the server (all of your files) are backed up to a remote location 14 separate times before starting again - that means 14 separate backups!

In addition, you receive:

- A Control Panel where you can create custom links so that you can login to one place and get to everything online that you need (your website, your administration panels, view statistics for your website, even change text on existing pages, and so on.)

- 20 Email Addresses you can create or delete which can be used if you download to your computer or send from your computer. This system does not offer Webmail allowing you to use email online - see below for that service. But the email addresses are associated with your domain name for advertising your brand - (example: info@yourdomain.com).

- Webmail System is called Noteworthy - which is a high-end email service you can use online, or download to your computer. This is housed in our datacenter and is also watched 24/7 by professional technicians. In today's age of spam filters you really should use this system as it guarantees (99%) of your email will always get through. This is an additional

service and costs \$5 per email account - but is well worth it if you want to use the online system. We realize that other services offer this included in their hosting fees - but what they do not tell you is that email based on servers that also host websites, can become easily blacklisted, so your email may be sent OUT but never arrive to its destination.

- We're local, we care about what is going on, and we're a phone call away. Don't save \$10 bucks and have your site down 14 times a day and not even know it or email being deleted before it gets to its destination. You need a professional service, it costs a little more but in the end it is well worth it.
